

AMENDMENT TO CLAIMS:

04

1. (Currently Amended) An economical data processing system, comprising:
means for forming a virtual space in use with a network which includes a plurality of computers connected to each other;
means for forming virtual currency which represents a value index in said virtual space;
and
a virtual currency storing means for storing said virtual currency; and
a value information storing means for storing value information representing value produced in said virtual space and convertible to a real economical value of a real world;
wherein said virtual currency and said value information are ~~is~~ delivered in said virtual space.

2. (Cancelled)

3. (Currently Amended) The economical data processing system of claim 12, wherein value of said valuable information is represented as value data, representing said virtual currency, in said virtual space; and said valuable information storing means stores said valuable information in relation with said value data.

4. (Currently Amended) The economical data processing system of claim 12, wherein said valuable information is exchangeable with said virtual currency in said virtual space.

5. (Currently Amended) The economical data processing system of claim 12, wherein said valuable information is represented as value data, representing said virtual currency, in said virtual space; further comprising:

a valuable information evaluation means for evaluating a value of said valuable information so as to generate said value data of said valuable information.

6. (Currently Amended) The economical data processing system of claim 21, further comprising:

a4
a-an identification (ID) data generating means for giving ID data to a subject which delivers said virtual currency in said virtual space.

7. (Original) The economical data processing system of claim 6, further comprising:
a ID data judging means for judging whether or not said subject is allowed to make a connection with said virtual space in accordance with said ID data, and giving a permission to said subject to make a connection with said virtual space when said subject has said ID data with authenticity.

8. (Currently Amended) The economical data processing system of claim 6, wherein said ID data generating means gives said ID data to a subject which delivers said valuable information; and said valuable information storing means stores said valuable information in relation with said ID data.

9. (Original) The economical data processing system of claim 6, wherein said virtual currency storing means stores said virtual currency in relation with said ID data.

10. (Original) The economical data processing system of claim 1, further comprising:
a virtual currency evaluation means for evaluating said virtual currency in a value system of real currency.

11. (Original) The economical data processing system of claim 10, further comprising:
means for exchanging said virtual currency with said real currency in accordance with
the evaluation result of said virtual currency evaluation means.

12. (Currently Amended) The economical data processing means of claim 12, wherein
said valuable information is image information.

ay 13. (Currently Amended) The economical data processing means of claim 1, wherein
a subject is given said virtual currency as a ~~reward~~ reward for being restricted in said virtual
space for a period of time.

14. (Currently Amended) An information processing apparatus, in use with an
economical data processing system of a virtual space which is provided by a network of a
plurality of computers connected to each other, comprising:
means for forming virtual currency which represents a value system in said virtual
space; and
a value information storing means for storing value information representing value
produced in said virtual space and convertible to a real economical value of a real world;
wherein said virtual currency and said value information are delivered in said virtual
space.

15. (Currently Amended) A recording media for recording a program of the
economical data processing system ~~of claim 1~~, wherein said economical data processing system
comprises:

_____ means for forming a virtual space in use with a network which includes a plurality of computers connected to each other;

_____ means for forming virtual currency which represents a value index in said virtual space;

_____ a virtual currency storing means for storing said virtual currency; and

_____ a value information storing means for storing value information representing value produced in said virtual space and convertible to a real economical value of a real world;

_____ wherein said virtual currency and said value information are delivered in said virtual space.
